

COST Action Urban Agriculture Europe Open Conference

Milan, Italy, 23/09/15

Politecnico di Milano

Urban Agriculture (UA) plays a key role in two global challenges: urbanization and food security. It can provide an important contribution to sustainable, resilient urban development and the creation and maintenance of multifunctional urban landscapes. In the globally emerging research field of UA, a European approach to the subject needs to be created. It has to integrate the unique European context regarding its urban and landscape pattern, the important role of the Common Agriculture Policy (CAP) and the needs of the European society. The COST-Action Urban Agriculture Europe (UAE) has defined this European approach on the basis of existing research projects and reference regions in the partner countries: the open Conference aim to present the results of the four year Action to the public and discuss them with worldwide expert in Urban Agriculture.

The outcomes of the Action will help to focus future research on UA, modify the CAP and stimulate private and public activities in UA projects and planning. By working in close cooperation with regional stakeholders from the domains of urban development and agriculture the Action contributes to sustainable, resilient territorial development in Europe and aims for leadership in research on UA in developed countries.

Parallel initiatives take place at Politecnico during the conference period:

- **“Carrot City, designing for Urban Agriculture”** a traveling exhibition, conceived by Joe Nasr, June Komisar and Mark Gorgolewski from Ryerson University of Toronto, collecting worldwide experiences of designing urban places at different scales for urban agriculture: 32 panels coming from Bologna Urban Center and enriched by two more panels about Milan experiences will be shown.
www.ryerson.ca/carrotcity
- An exhibition of **posters collecting Italian experiences of Urban Agriculture** from the members of the Researcher Network on Urban and Peri-urban Agriculture and Food Planning
